Thank you.

As far as the linking/website that I was referring to – I apologize it if there was confusion – but it is the same page that was used previously, but it is not one that will be archived, it is the Models for Pesticide Risk Assessment page that is our (OPP) headquarters for our final/published QA'd models. Whereas some of the models on this site are only provisional or used in different ways and that is why links/sources are different.

I was just indicating that this citation to the public website was used in the Final BE's published in January – and didn't mean to create confusion suggesting that we were linking to an archive site – which I totally understand would not be possible.

I hope this explanation helps – if you want to talk about it more, please let me know. I am in the office today and can be reached at (703) 347-8066.

I'll check the rest of the website as well.

Thanks,

Christina

Good Afternoon Christina,

Please review the latest edits.

<https://wcms.epa.gov/node/129289/revisions/514041/view>

I see you want to have what will be a the new version of the models page to link to what will be an archived older version. It web guide recommends against linking directly an archived page. I am not sure how you would like to proceed with this.

Subject: RE: Updates - landing pages (NAS, carbaryl & methomyl)

Hi Miriam,

After our management review of the NAS landing page, and the carbaryl and methomyl pages there is one thing that will need to be edited on all three pages, to be consistent with current language in the OPP update. This was discussed briefly as a possibility at our meeting yesterday afternoon, but it was decided that this was needed today during the management review of the webpages.

Ex. 5 - Deliberative Process

Ex. 5 - Deliberative Process

This is the only change that needs to be made to these 3 pages. Please let me know if you have any questions.

One more thing to re-emphasize is the sensitivity of these webpages.

Ex. 5 - Deliberative Process

Ex. 5 - Deliberative Process

Thanks again for everything,

Christina

Subject: Updates - carbaryl & methomyl (post review), plus final few pieces for posting

Hi Team,

Attached please find the pdf file (*Instructions for Commenting on the Draft Biological Evaluations for Carbaryl and Methomyl*); a document that to be linked in both the carbaryl and methomyl launch pages, as well as the main NAS launch page (as noted in the document). This document is also attached for posting with updates/changes made to the document in track changes.

The provisional models page language is also attached and the associated documents/links are in the H drive (H:\NAS Pilot\CARB+METH Draft BEs\Tools) folder ready for downloading. This

page is similar to that posted previously, but those tools that are updated are available for downloading – questions please let me know.

One Attachment – Attachment 4-1 had to be revised, and has been already downloaded to the Attachments folder on the H:NAS drive folder and is ready to be uploaded to both chemicals when ready.

Also, there are a few outstanding chemical specific launch page issues/notes to be addressed and so the word documents of both of those pages are also attached with the edits made/comments in track changes. The main point being that the Attachments are the same for both carbaryl and methomyl and there appears to be some discrepancies in file sizes/and page numbers in either methomyl/carbaryl and it's something that was noted during the review. Also, in the carbaryl page there are some broken links for some of the appendices (those that are affected are noted in the attached document).

If you have any questions or need anything else, please let me know.

Thanks!

Christina

Subject: RE: Carbaryl files in H drive folder, ready for downloading

Hi Delphine and the rest of the Web team,

Attached is the updated landing page word file for both carbaryl and methomyl (updated according to Claire's webformatting recommendations). This way you have what you need for both chemicals; even though the language is the same, but the content below is different... But there are some additional changes captured for each in the document as well. (Document sizes/page #'s in methomyl and file types in carbaryl)...

Also, Great catches in carbaryl for the XLSX Appendices – there were differences in the file types between the different chemicals and I am glad to have had an additional eye to catch those. I checked the links for the chapters for carbaryl – still need to look over the Attachments and Appendices – so far looking good. But will keep you posted.

We will have an update for the models page and NAS landing page coming shortly as well as a

heads up. Plus the instructions for commenters that is being mentioned.

Thanks again!

Christina

Subject: Attachment files in H drive folder, ready for downloading

Hi team,

I have just added the Attachment files, and these are available on the H drive, ready for downloading. As a reminder, the Attachment files are the same for both methomyl and carbaryl, they have been placed in a separate folder in H:\NAS Pilot\CARB+METH Draft BEs.

We are hoping to send carbaryl a little later on.

Any questions or issues, please let me know.

Thank you,

Christina
